Description

ENTRY LEVEL (WAVE)
The WAVE Series is designed specifically for compact watercraft models such as the Sea-DooRegistered SparkRegistered, KawasakiRegistered SX-RTrademark, YamahaRegistered SuperjetTrademark and EXTrademark.

Fully Welded Frame: The Triton difference - all-aluminum, fully welded frame provides a solid structure for years of loading and unloading. A dual-bowed design cradles compact watercraft, providing a lower launch height.

Overall length: 148"

60" Tongue: Long 60" tongue for easy trailer maneuvering and launching.

Designed To Fit Compact Watercraft Models: Adjustable 5' bunks fit compact watercraft, and the bow stop roller is movable up, down and along the tongue for a proper fit.

Adjustable Bunks: 5' bunks adjust from left to right to properly accommodate the craft hull, and can also be angled to perfectly cradle the craft.

Galvanized Axle: Galvanized spring axle for corrosion resistance.

Sealed LED Lights: Sealed lights and wiring harnesses throughout trailer resist corrosion caused by moisture.

Keel Guard: Non-marring keel guard and capped ends shield your craft at potential impact area. Both are UV-resistant.

Tie Downs: Four welded aluminum tie downs provide multiple points to secure watercraft.

Number of Watercraft: 1

Accessories

- Swivel Wheel Tongue Jack
